

Onward from here, we must become clear. There's no time to lose: this one is our year. Green plastic gets stuck in single-use ruts. Clear plastic unlocks loops as sweet as donuts.

Transparency unlocks sustainability. Yes, we could use virgin material to forge a key. Or, we can pick the lock using creativity. Through music we might find our Moment of Clarity.

Trash to our rear and recycling's the way. Like any good beat from your favorite DJ. How best to recycle? They showed us how. They drop the needle and past becomes now. Less using up. More getting down.

Our icons use sampling to make new from elapsed, Like Madlib making tracks for raps in ALLCAPS, Or Ronson bridging gaps across musical maps, Remixing genres from boom bap to trap, Causing fans to collapse, or scream out "that song slaps". Both recycle sound to create famous beats, And through their techniques, renewability speaks.

We Step Into Tomorrow by recycling today, The sample kit's loaded up, you just need to hit play, It's time to cosplay as a famous DJ, Turning old into new in your own special way.

And so it comes down to the collective "we". Who knew MC stood for "More Creativity". We make bottles from bottles, and recycle sound to make songs. So that - like our favorite records - the world may spin on.

From bottles to beats, you don't want to wait. Recycled Records: (Re)use. (Re)mix. (Re)create.

Coca-cola company sells more than 100 billion single-use plastic bottles each year with many ending up in landfills and the ocean.
<https://www.greenpeace.org/aotearoa/story/unbottling-the-truth-coca-colas-role-in-plastic-pollution/>

Coca-Cola aims to make its music marketing platform an "established music brand" in its own right, pitching it against companies such as iTunes and MySpace.
<https://www.marketingweek.com/coca-cola-music-aims-to-become-established-music-brand/>

Coca-Cola has a long history of effective advertising, which has helped to build brand recognition and customer loyalty. The company invested \$4.4 billion on advertising and promotions in 2020.
<https://www.tutor2u.net/economics/reference/why-is-coca-cola-so-profitable>

When we launched the World Without Waste program in 2018, we indicated that our projected spending would be in line with our water stewardship efforts over the prior decade, which was approximately \$2 billion (USD). After three years of implementation, we are spending ahead of that trajectory, which we knew at the time was a conservative estimate.
